

Digital Fan Cycle Control

Save valuable time and money with our new digital fan cycle control!

Century Refrigeration proudly introduces the Carel Controller as our standard digital fan cycle control. Starting August 1, 2014, all condensers, condensing units and chillers will include the Carel Controller when a fan cycling or flooded condenser option is purchased. This addition will eliminate pressure lines and flare fittings to save you precious time and money. The fan cycle control is shipped with pre-loaded factory program setpoints installed in our standard NEMA3R control panel.

The Carel Control has been thoroughly tested in our product development facility to ensure that we continue to deliver the **Time Tested Toughness™** you expect from Century.

*Traditional electromechanical controls are still an available option.

BENEFITS INCLUDE:

- Elimination of copper fan cycle lines and flare fittings to reduce leak potential.
- Decreased life cycle costs for equipment.
- Utilization of a transducer for accurate pressure measurement and control.
- Digital readout for instant condenser pressure monitoring and set point accuracy.
- Ability to adjust setpoints quickly and easily to dial in optimal performance.
- One controller handles up to four stages of fan cycle with up to four fans per stage.
- Less panel space required resulting in enhanced access and serviceability.
- Stocked and programmed at the factory or your local representative office.
